

All-Aluminum since 1964

Marion Rescue & Fire

A Continuing Tradition of Quality.

A Tough Job Demands A Tough Finish.

You can tell a Marion finish. Nothing else even comes close. Bodies are painted *before* we put them on the chassis, so every nook and cranny receives full coats of primer and finish. Surfaces are meticulously prepared. Every piece of metal is thoroughly sanded before it's bent. Every hole has been punched, before a drop of paint is applied.

Our six-stage paint process consists of three coats of epoxy primer and three coats of tough, top quality polyurethane paint. Corrosion prevention is carried into every detail of construction. We make generous use of nylon collars, Mylar tapes, industrial adhesives, and stainless steel screws. Painting is an art. And every Marion finish is a masterpiece.

THE BEST INVESTMENT YOU CAN MAKE IN A

When you want the highest quality Rescue and Fire Vehicles on the market, exactly the way you want them, at a price within your budget – you want Marion. We can provide the full spectrum of Rescue and Fire Apparatus, custom-designed to your specs, and built with craftsmanship and attention to detail unmatched in the industry

The Strongest Choice.

Marion is America's original builder of all-aluminum emergency equipment bodies. We've been using all aluminum since 1964, and we build the strongest body in the business. The entire body – including the substructure – is made of strong, lightweight, corrosion-free aluminum. There is no heavy steel sub-frame, vulnerable to salt, water and, inevitably, rust. You can stop worrying about corrosion, and you can devote more weight to payload.

It's Your Vehicle – You Design It.

Everyone says they "customize" your vehicle. At Marion, your truck is built from the ground up to your specs, not from a base model design. Use your imagination and our Idea Book, filled with blueprints of hundreds of custom trucks we've built, to create a one-of-a-kind vehicle around your department's unique needs. You choose the chassis you want and the brand of components you want us to use. Our design engineers will bring it all together.

Marion Pumpers

MARION RESCUE & FIRE APPARATUS

A Full line – A Full 10-Year Structural Warranty

Marion manufactures a full line of premium-quality Rescue and Fire Apparatus – Rescue Vehicles (walk-in and non-walk-in), Haz-Mat Vehicles, Pumpers, Rescue Pumpers and Aerials. We're so confident in the construction, durability and long life of our vehicles that we provide a ten-year structural warranty. In our forty years producing all-aluminum vehicles, we have never had a body structural claim.

Marion Body Works is an independent, family owned and operated manufacturer. When you deal with us, you'll find an uncommon dedication to craftsmanship and customer service, and an ability and willingness to go the extra mile where others often won't. Our nationwide network of dealers delivers exemplary service, and your Marion representative is always there for you, to handle any questions or concerns.

REAL CUSTOMIZATION. With our size comes flexibility. Every Marion truck is one-of-a-kind. We can give you custom touches the "big boys" can't – or won't.

"FLOATING BODY" DESIGN. We mount our bodies to "float", eliminating structural problems associated with bodies bolted rigidly to a subframe.

CONQUERING CORROSION. We go the extra mile. Tube ends are capped and welded to seal out moisture and contaminants. Seams are minimized. In fact, we're the only one in the industry that welds wheelwell seams. No one isolates parts to prevent galvanic corrosion as thoroughly as we do.

THOROUGH TESTING BEFORE DELIVERY. Every truck is completely tested before delivery. Generators are tested on our custom-built load bank generator tester, simulating actual field usage. A Certified Weight Analysis is performed to verify its GVW. We won't build an unsafe vehicle.

The Marion Predator™ Chassis

Now you can not only have a legendary all-aluminum Marion body, you can have an all-aluminum Marion cab as well. The Marion Predator. Designed and built with the same quality and all-aluminum extrusion technology found in Marion bodies.

EMERGENCY VEHICLE.

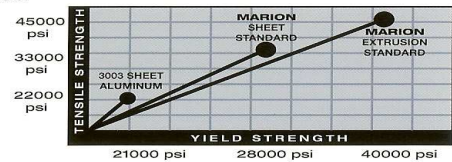

WIRING DIAGRAMS are created specifically for your apparatus as built, no generic drawings.

Multiplex Wiring – Standard.

Every Marion Vehicle features state of the art Multiplexing. A software-driven digital network controls the 12-volt electrical system, providing greater flexibility and reliability. Troubleshooting is quick and easy, and an optional modem enables Marion engineers to analyze, diagnose and reconfigure vehicle electronics over the telephone.

Marion Extrusions – 105% stronger!

Marion bodies are fully extruded, using state-of-the-art fabrication systems. Virtually every piece of metal is CNC produced, not cut up on the production floor. The same knowledge and experience that enables us to build specialized military equipment – permeates every Marion vehicle.

IN TENSILE STRENGTH, Marion extrusions are 105% stronger than 3003 sheet, and 36% stronger than 5052 sheet.

IN YIELD STRENGTH (the point where distortion begins), Marion extrusions are 90% stronger than 3003 sheet, and 43% stronger than 5052 sheet.

Virtual Progress Reporting.

With Marion there are no surprises. Specs are reviewed in special "Prebuild Meetings". Any suggested modifications must meet your approval. Video and digital photo updates on the internet keep you continually apprised of your truck's progress from start to finish. The result? You get the truck of your dreams. A vehicle as

individual as your department, that will serve you for years to come.
